

Circular Saw Blades for Wood Cutting

These circular saw blades are designed for cutting wood. They feature varying diameters and tooth configurations to suit different cutting applications and are constructed from high-speed steel or carbide-tipped teeth for durability and precision.

Product Overview

Professional Wood Cutting Performance

These circular saw blades are engineered for precision and durability in diverse wood cutting applications. Featuring high-speed steel or carbide-tipped teeth, they ensure clean cuts and long-lasting performance across a variety of projects. Designed for versatility, they are fully compatible with table saws, miter saws, and standard circular saws.

Technical Specifications

Compatible Equipment

- Table Saws
- Miter Saws
- Circular Saws

Primary Material

Wood

Blade Material

High-Speed Steel, Carbide-Tipped
