

Circular Stainless Steel Flange with Bolt Holes

This stainless steel flange has a circular design with a central bore and bolt holes. It is suitable for connecting pipes or attaching equipment to pipe systems.

Product Overview

Industrial Circular Flange

This circular stainless steel flange is designed for robust performance in industrial piping systems. Featuring a precisely machined surface and four evenly spaced bolt holes, it ensures a secure, leak-resistant connection between pipe sections or equipment. Built for reliability, this component is an essential element for professional fluid and gas transport installations.

Technical Specifications

Design Features

- Circular geometry
- Central bore design
- Four pre-drilled bolt holes
- Machined smooth surface finish

Material	Stainless Steel
