

Circulator Pump for Heating Systems

This circulator pump is designed for heating systems. It features a compact design with a low side-connection for easy installation.

Product Overview

Professional Heating Circulator Pump

This high-efficiency circulator pump is engineered specifically for residential and light commercial heating systems. Featuring a compact design with a low side-connection, it ensures straightforward installation in confined spaces. Built with durable materials, this pump provides reliable performance while offering variable speed settings to help optimize energy consumption and system flow.

Technical Specifications

Rated Voltage	230 V
Frequency	50 Hz
Power Consumption	70 W
Maximum Pressure	0.3 MPa
Temperature Class	TF 95

Features

Operational Highlights

70 W Power Rating	0.3 MPa Max Pressure
-----------------------------	--------------------------------

Certifications	CE, Low Energy
