

City Bus for Urban Transportation

This city bus is designed for urban transportation. It features a low-floor design for easy access and is powered by LPG.

Overview

Urban Transportation Solution

This city bus is specifically engineered for efficient urban transit, combining a streamlined design with practical accessibility features. Its low-floor architecture facilitates rapid passenger boarding and alighting, essential for high-frequency city routes. Designed with environmental considerations in mind, this vehicle utilizes LPG as a fuel source, offering a cleaner alternative for municipal transportation networks.

Technical Specifications

Fuel Type

LPG

Equipment Summary

- Front destination display
- Multiple passenger windows
- Low-floor accessibility

Model Designation

GZ6102SV(LPG)

Key Design Features

Low-floor, Urban Transit, Streamlined Body
