

City Bus for Urban Transportation

This city bus is designed for high-capacity urban transportation. It features a spacious interior, multiple entry/exit doors, and a low-floor design for easy accessibility.

Overview

Urban Transportation Solution

This articulated low-floor city bus is engineered specifically for high-capacity urban transit environments. Designed with passenger accessibility and safety in mind, it features a spacious interior layout and multiple entry points to facilitate efficient boarding. The vehicle is optimized for high-density routes and Bus Rapid Transit (BRT) systems, offering a reliable and secure transportation solution.
