

# Classical Wrapped V-Belt - 9.5mm Top Width

This classical wrapped V-belt is suitable for a wide range of power transmission systems. The belt provides reliable power transfer and long service life in demanding industrial environments.

## Product Overview

### Classical Wrapped V-Belt

This classical wrapped V-belt is engineered for reliable power transmission in a variety of industrial machinery applications. Its robust design features a protective bias cover that offers excellent friction resistance and flexibility, safeguarding the internal components. With a high-tenacity polyester cable cord tension member, this belt ensures consistent performance, minimal heat buildup, and a long service life even in demanding environments.

## Dimensions

Top Width	9.5 mm
Height	8 mm

## Construction

### Key Construction Features

- Bias protective cover for friction resistance
- Solid rubber body for cable cord support
- Polyester cable cord tension member
- Wrapped construction for enhanced durability

## Performance

### Performance Highlights

<b>1 Low</b> Heat Resistance	<b>1 High</b> Flexibility
---------------------------------	------------------------------

## Applications

Industry Suitability	Power Transmission, Industrial Machinery, General Industrial
----------------------	--
