

Clear PVB Film for Architectural Laminated Glass

This clear polyvinyl butyral (PVB) film is designed for architectural applications in laminated glass. The film enhances safety by providing impact resistance and glass retention, ideal for windows and curtain walls.

Product Overview

High-Performance Architectural PVB Film

This Clear Polyvinyl Butyral (PVB) film is engineered specifically for architectural laminated glass applications, providing superior impact resistance and glass retention. It bonds strongly with glass layers to prevent shattering, significantly reducing injury risks while enhancing safety and security. Beyond structural integrity, the film offers excellent optical clarity, effective UV protection, and improved sound insulation for comfortable, energy-efficient environments.

Material Composition	Polyvinyl Butyral (PVB)
-----------------------------	-------------------------

Key Features

Performance Benefits	Impact Resistance, Glass Retention, UV Protection, Sound Insulation, Optical Clarity
-----------------------------	--

Applications

Recommended Applications

- Architectural windows
- Curtain walls
- Skylights
