

Clutch Assembly

This clutch assembly is a crucial component in a vehicle's transmission system. It consists of the clutch basket, clutch plates, pressure plate, and release bearing.

Product Overview

High-Performance Clutch Assembly

This precision-engineered clutch assembly serves as a critical component in vehicle transmission systems, ensuring reliable power transfer from the engine to the transmission. The assembly is composed of a durable clutch basket, alternating friction and steel plates, a robust pressure plate, and a smooth-operating release bearing. Designed for optimal engagement and disengagement, this unit provides the necessary friction and force management required for consistent vehicle performance.

Technical Composition

Included Components

- Clutch Basket
- Friction Plates
- Steel Plates
- Pressure Plate
- Release Bearing

Materials

Steel, Aluminum

Functional Metrics

Primary Function

Power transmission from engine to transmission

Engagement Mechanism

Pressure plate force application
