

Clutch Pressure Plate Assembly

This clutch pressure plate assembly is designed for optimal performance and durability in automotive applications. It features a robust construction to withstand high torque and heat, ensuring reliable engagement and disengagement of the clutch.

Product Overview

High-Performance Clutch Pressure Plate Assembly

This clutch pressure plate assembly is engineered for optimal performance and durability in demanding automotive applications. Featuring robust construction designed to withstand high torque and heat, it ensures reliable clutch engagement and disengagement. The assembly utilizes a diaphragm spring to deliver consistent clamping force and smooth operation, making it an essential component for vehicle maintenance and drivability.

Technical Specifications

Key Features

- Diaphragm spring for consistent clamping force
- High-heat resistance construction
- High-torque capacity design
- Precision-engineered components

Quality Compliance

OEM Specification Compliant, Rigorous Testing, High-Durability Materials

Application

Primary Application

Automotive Drivetrain
