

Clutch Release Bearing for Manual Transmissions

This clutch release bearing is a critical component in a vehicle's manual transmission system. It is designed to smoothly engage and disengage the clutch, facilitating gear changes.

Product Overview

High-Performance Clutch Release Bearing

This clutch release bearing is a critical component engineered for manual transmission systems. Designed for robust performance, it ensures smooth and reliable clutch engagement and disengagement during gear transitions. Its precision-engineered construction facilitates seamless operation, making it an essential upgrade for maintaining transmission efficiency and vehicle reliability.

Technical Specifications

Key Features

- Robust metallic construction
- Integrated release mechanism
- Precision spring and lever assembly
- Flanged mounting interface

Manufacturer Part Code	X0007
Construction Material	High-grade Metal
Application Compatibility	Manual Transmission, Clutch System
