

CNC External Grinding Machine

This CNC cylindrical grinding machine is designed for precision external grinding operations. It features a programmable control panel, enclosed work area with safety doors, and a robust base for stability.

Overview

High-Precision Grinding Solution

This high-speed CNC cylindrical grinding machine is engineered for precision external grinding operations in demanding industrial environments. It features a robust base for maximum stability and an enclosed work area with safety doors to ensure operator protection. Equipped with a programmable control panel and operational status monitoring, it provides the reliability and accuracy required for complex high-precision machining tasks.

Technical Specifications

Model Number	AWM1410
Machine Type	CNC Cylindrical Grinding Machine

Key Features

Design & Safety

- Robust base for enhanced stability
- Enclosed work area with safety doors
- Programmable control panel
- Multi-indicator light for operational status

Capabilities	CNC Controlled, High-Speed Grinding, External Grinding, Precision Machining
