

CNC High-Speed Metal Circular Sawing Machine

This CNC high-speed metal circular sawing machine is engineered for precision and efficiency in metal cutting applications. Its high-speed cutting capabilities and automated features make it ideal for high-volume production environments.

Product Overview

Precision High-Speed Cutting

This CNC high-speed metal circular sawing machine is engineered for precision and efficiency in demanding metal cutting applications. It features a robust build and advanced control systems designed to deliver accurate and repeatable cuts consistently. With high-speed cutting capabilities and automated features, this machine is an ideal solution for high-volume production environments looking to optimize workflow.

Operational Features

Core Capabilities

- Advanced CNC control system
- User-friendly interface
- Integrated coolant system
- Automated chip conveyor system
- Safety enclosure

Operational Benefits

High-Volume Production, Extended Blade Life, Operator Safety, Efficient Waste Removal

Technical Specifications

Model Identifier

85NC
