

# CNC Horizontal Fine Boring Machine

This CNC horizontal fine boring machine is designed for precision boring operations. It features robust construction, an advanced control system, and high-accuracy components to ensure reliable and efficient performance.

## Overview

### Precision Engineering Solution

The CNC Horizontal Fine Boring Machine (TKJ7140/TKJ7040) is a robust industrial tool engineered specifically for high-precision boring operations. Designed with advanced control systems and high-accuracy components, this machine ensures reliable and efficient performance for demanding industrial applications. Its horizontal configuration provides stability and consistency, making it an essential asset for workshops requiring superior fine boring capabilities.

## Technical Specifications

### Primary Application

Precision Boring • Industrial Manufacturing

### Available Models

TKJ7140, TKJ7040

### Machine Type

CNC Horizontal Fine Boring Machine
