

CNC Horizontal Turning Lathe

This CNC horizontal lathe is engineered to meet specific customer requirements, enhancing processing accuracy. It increases processing efficiency while reducing operational costs.

Overview

High-Precision Turning Solution

This CNC horizontal lathe is engineered to meet specific customer requirements for unique applications. It is designed to significantly improve processing accuracy, increase overall production efficiency, and reduce operational costs for enterprises. Featuring a robust construction and advanced control systems, this machine is built for reliable, high-speed metal cutting performance.

Technical Specifications

Model Number	CKHG-125XW
Connectivity Features	Bluetooth

Key Features

Performance Metrics

1 High

Processing Efficiency

1 High

Accuracy

Machine Capabilities

- Robust construction
- Advanced control system
- High-speed spindle
- Automated tool changer
- User-friendly interface
