

CNC Lathe

This CNC lathe is used for precision machining of parts. It is designed for automated turning, facing, and threading operations on various materials.

Overview

Precision CNC Lathe Overview

This industrial-grade CNC lathe is engineered for high-precision machining, offering reliable performance for turning, facing, and threading operations. Featuring a robust, protective enclosure and an intuitive control panel, it is designed to deliver consistent accuracy and repeatability in demanding manufacturing environments. Its versatile capabilities make it an essential asset for workshops requiring automated, high-quality component production.

Technical Specifications

Application

Industrial • Precision Machining

Model Number	CK6136
Machining Capabilities	Turning, Facing, Threading

Design Features

Design Features

- Robust frame construction
- Full protective enclosure
- Integrated control panel with screen
- Automated operation sequence
