

CNC Lathe

This CNC lathe is a precision machine tool used for metalworking, ideal for creating cylindrical and conical shapes. Its robust construction includes a fully enclosed work area and a digital display for monitoring and control.

Overview

Precision CNC Turning Solution

The CK6130 is a precision CNC lathe engineered for high-performance metalworking and turning operations. Designed with a robust, sturdy base and a fully enclosed work area, it ensures both stability during high-speed machining and operator safety. Its compact design features an integrated digital control system, making it an ideal choice for creating complex cylindrical and conical shapes with accuracy.

Technical Specifications

Model Number	CK6130
Machine Type	CNC Lathe

Features

Key Features	Precision Metalworking, Fully Enclosed Work Area, Digital Display, Turning Operations, Sturdy Base
Control System	Integrated Digital Display with Manual Fine Adjustment
