

CNC Lathe

This CNC lathe is a machine tool used for metalworking. It features a headstock, tailstock, carriage, and tool post for turning and machining operations.

Product Overview

Precision CNC Lathe Capability

The CK6136 is a professional-grade CNC lathe engineered for high-precision metalworking operations. Featuring robust components including a stable headstock, carriage, and precision tool post, this machine is designed to excel in turning, facing, and complex machining tasks. It provides a reliable solution for industrial workshops requiring consistent accuracy and efficient metal component production.

Technical Specifications

Model Number	CK6136
Machine Type	CNC Lathe
Primary Machining Functions	Turning, Facing, Metalworking
