

CNC Lathe for Metal Machining

This CNC lathe is designed for high-precision metal machining operations. It features a rigid construction for stability and accuracy and a user-friendly CNC control system for easy programming.

Overview

High-Precision CNC Lathe

This CNC lathe is engineered for high-precision metal machining operations, offering a robust and stable platform for industrial manufacturing. It features a user-friendly control system that simplifies complex programming tasks while maintaining a compact footprint to maximize workspace efficiency. Equipped with an automatic tool turret and an integrated coolant system, it is an ideal solution for versatile turning, facing, and threading applications.

Key Features

Core Components

- Workpiece chuck
- Automatic tool turret
- Coolant system

Model	CK6136
Machining Capabilities	Turning, Facing, Threading

Performance Metrics

Construction

Rigid Construction • High Stability • High Accuracy

Operational Highlights

1 System

Easy Programming

1 Design

Compact Footprint
