

CNC Lathe for Metalworking

This CNC lathe is designed for metalworking, offering high precision in various machining operations. It features a robust construction and an advanced control system for accuracy and repeatability.

Overview

High-Precision CNC Lathe

This CNC lathe is engineered specifically for demanding metalworking applications, offering a robust construction suitable for industrial environments. It features an advanced control system and an enclosed workspace to ensure operator safety during operation. With high accuracy and repeatability, this machine is ideal for a variety of turning, boring, and threading tasks.

Technical Specifications

Model Identifier	CY-K500T
Machining Operations	Turning, Boring, Threading

Features

Safety and Control

- Enclosed workspace
- Advanced control system
- Digital display for real-time monitoring
- Adjustable machining parameters
