

CNC Lathe Machine

This CNC lathe machine is a computer-controlled machine tool used for metalworking. It is designed for precision turning, facing, and other machining operations on various materials.

Overview

Precision CNC Lathe Machine

The CK6130 is a high-performance, computer-controlled lathe machine engineered for precision metalworking tasks. Designed with a robust, fully enclosed structure, it ensures operator safety while maintaining high accuracy during complex machining operations. This machine excels at turning, facing, and various other industrial machining processes, making it an essential tool for modern manufacturing environments.

Technical Specifications

Model	CK6130
Machine Type	CNC Lathe

Key Features

Safety & Design

Fully Enclosed Work Area • Robust Construction • Integrated Control Panel

Machining Operations	Turning, Facing, Precision Machining, Metalworking
