

CNC Lathe Machine for Precision Machining

This CNC lathe machine is designed for precision machining operations. It features a multi-axis control system and enclosed work area, making it suitable for a wide range of materials including metals and plastics.

Overview

Precision CNC Machining Capability

This CNC lathe machine is engineered for high-precision machining operations, featuring a robust construction designed for stability and accuracy. It includes a fully enclosed work area to ensure operator safety and effective chip containment during high-speed production. With an integrated multi-axis control system and a user-friendly interface, it allows for the efficient production of complex part geometries across a variety of materials, including metals and plastics.

Technical Specifications

Model Number	CK6151
Machine Type	CNC Lathe

Features

Compatible Materials

- Metals
- Plastics

Key Features	Precision Machining, Multi-axis Control, Fully Enclosed Work Area, Integrated Coolant System
--------------	--

Performance

Performance Highlights

1 Multi-axis
Control System
