

CNC Metalworking Lathe

This Computer Numerical Control (CNC) lathe is a machine tool used for metalworking and machining. It is designed for automated cutting, turning, and shaping of materials with high accuracy and repeatability.

Overview

Precision CNC Machining Solution

This Computer Numerical Control (CNC) lathe is a robust machine tool engineered for high-accuracy metalworking and machining tasks. Featuring a fully enclosed workspace, it ensures operator safety while maintaining precision during automated cutting, turning, and shaping operations. The integrated control panel and digital display allow for intuitive programming and real-time monitoring, making it an ideal choice for manufacturing, engineering, and prototyping environments.

Technical Specifications

Model Number	CK6136
Machine Type	CNC Lathe

Features

Suitable Applications

- Manufacturing
- Engineering
- Prototyping

Key Features	Automated Machining, High Accuracy, High Repeatability, Fully Enclosed Workspace
