

CNC Metalworking Lathe

This CNC lathe is a machine tool used for metalworking. It features a multi-axis control system for complex machining and a high-precision spindle for accurate material removal.

Overview

Professional CNC Metalworking Lathe

The CKS4536T CNC lathe is a high-precision machine tool engineered for complex metalworking operations. Featuring a fully enclosed design, it ensures optimal safety and effective chip containment during high-speed machining. Its robust frame provides the stability needed for consistent accuracy, while the multi-axis control system and programmable interface allow for efficient, automated production.

Technical Specifications

Model Number	CKS4536T
Control System	Programmable CNC Control Panel

Key Features

Safety Compliance Chip Containment • Safety Enclosure	
Design Features	Fully Enclosed, Multi-axis Control, High-precision Spindle, Robust Frame
