

CNC Mini Vacuum Forming Machine

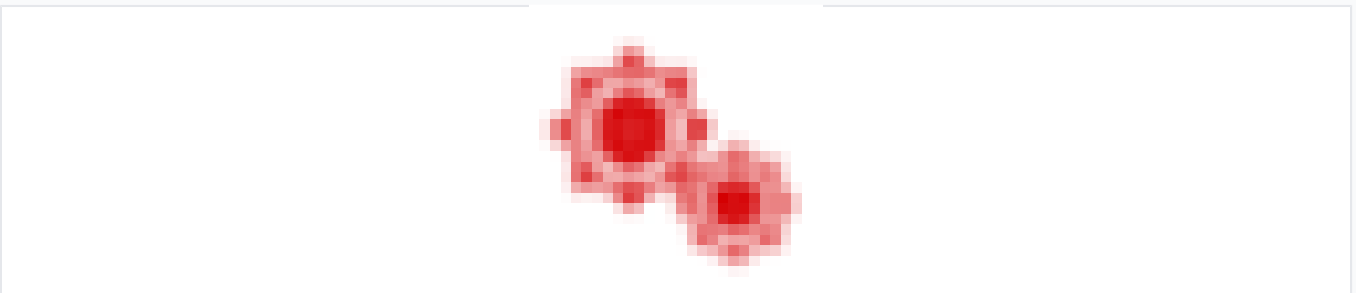

This CNC mini vacuum forming machine utilizes numerical control for precise operation. It is designed for small-scale production, making it suitable for creating intricate designs and prototypes.

Compact Precision Vacuum Forming

The CNC Mini Vacuum Forming Machine is a versatile, compact solution designed for small-scale mass production and prototyping. Featuring fully automatic, numerical control operation, it allows for consistent parameter setting to streamline handicraft and logo production. Its robust heating system and pneumatic platform movement ensure precise, uniform forming results for complex shapes up to 15 cm in depth.

Technical Specifications

Heating System

- Halogen tube heating
- Uniform temperature distribution
- Rapid heating speed
- Integrated preheat and heat preservation functions

Maximum Forming Depth

15 cm

Operation Mode

Numerical Control, Fully Automatic, Pneumatic Platform

Usage & Applications

Ideal Use Cases

Small handicrafts • Custom logos • Small-pattern blister packaging • Prototyping

Customization Options

Optional double oven heating style available based on specific production requirements.
