

CNC Precision Lathe

This precision CNC lathe is designed for metalworking and machining operations. It is ideal for creating cylindrical parts with high accuracy and repeatability and is suitable for various materials including steel, aluminum, and plastics.

Overview

Industrial Precision Engineering

This CNC precision lathe is engineered for high-accuracy metalworking and machining operations. Designed with a robust construction and an enclosed workspace, it ensures both safety and repeatability for demanding production environments. It is versatile enough to handle various materials, including steel, aluminum, and plastics, making it an essential asset for creating complex cylindrical parts.

Technical Specifications

Model Identifier	CK6130
Compatible Materials	Steel, Aluminum, Plastics

Key Features

Core Capabilities

- Digital display for precise control
- Enclosed workspace for operator safety
- Multi-tool turret for efficient production
- High accuracy and repeatability
