Overview

High-Efficiency Cabinet Production Line

This CNC router is a high-precision solution specifically designed for the automated production of cabinets and furniture components. It features a robust frame and an advanced control system to ensure exceptional accuracy during complex cutting, drilling, and milling operations. Equipped with an automated tool changer and material handling capabilities, this machine optimizes workflow for high-volume manufacturing environments.

Key Performance Metrics

Featured Specifications

3500 kg
Machine Weight

Technical Capabilities

Core Functions

- Precision Cutting
- Automated Drilling
- Milling
- Automated Tool Changing

Supported Materials

Wood, Plastics, Composites

Machine Features

Hardware Features

- Robust structural frame
- Advanced control system
- Automated material handling
- Integrated dust extraction system

Operational Benefits

High Precision • User-Friendly Software • Automated Operation • Safety Equipped

Physical Specifications

Total Weight

3500 kg

Applications

Primary Applications

- Cabinet manufacturing
- Custom furniture components
- High-volume wood processing
