

CNC Slant Bed Lathe

This CNC slant bed lathe is designed for precision metal cutting and turning operations. Its rigid structure provides enhanced stability and accuracy during high-speed machining.

Overview

Precision CNC Slant Bed Lathe

The CK61110B is a high-precision CNC slant bed lathe engineered for versatile metal cutting, turning, threading, facing, and contouring operations. Its robust slant bed architecture ensures superior rigidity and stability, while also facilitating efficient chip removal and improved operator ergonomics. Designed for reliability in both small-batch and large-scale production, this machine features an advanced control system and an 8-station tool turret for complex machining tasks.
