

CNC Ultrasonic Cleaning Machine

This CNC ultrasonic cleaning machine provides a powerful and efficient cleaning solution for various applications. High-frequency sound waves generate cavitation bubbles in a cleaning solution, which implode to remove contaminants from surfaces.

Overview

Professional CNC Ultrasonic Cleaning

The VGT-1990QTD is a precision-engineered ultrasonic cleaning machine designed for industrial and commercial applications. By utilizing high-frequency sound waves, it generates cavitation bubbles that efficiently remove contaminants from intricate components and delicate parts. The system offers precise control over time and temperature, ensuring consistent and optimal cleaning results while protecting item integrity.

Maintenance

Maintenance Guidelines

- Empty the tank completely after each use
- Clean the tank surface after operation
- Do not leave cleaning solution in the tank for extended periods

Features

Key Features

CNC Control, Ultrasonic Technology, Industrial Grade, High-Frequency Cleaning
