

CNC Vertical Machining Center

This CNC vertical machining center is designed for versatile machining operations. It features a multi-axis control system and tool changer for efficient material removal on a variety of materials.

Overview

High-Precision Vertical Machining Center

This CNC vertical machining center is engineered for versatile machining operations, offering high precision for complex part geometries. It features a fully enclosed workspace to ensure operator safety and maintain environmental control during operation. Designed for efficiency, the machine supports milling, drilling, tapping, and boring across a wide range of materials.

Performance Features

Spindle Performance

1 High-Speed

Spindle Type

Machining Capabilities

Milling, Drilling, Tapping, Boring

Design & Construction

Structural Characteristics

- Rigid machine structure for vibration damping
- Fully enclosed workspace
- Integrated coolant system
- Automated tool changer

Control System

Control System

Multi-axis control system with programmable control panel
