

CNC Vertical Machining Center

This vertical machining center is designed for precision milling and drilling tasks. It utilizes a CNC system for automated control, featuring a robust frame and a multi-tool carousel.

Overview

Precision Vertical Machining Center

This Vertical Machining Center is engineered for high-precision milling and drilling applications in industrial manufacturing environments. Featuring a robust frame construction and an advanced computerized numerical control (CNC) system, it provides automated control for complex machining tasks. The inclusion of a multi-tool carousel and an integrated coolant system ensures efficient, continuous operation for metal and composite material processing.

Technical Specifications

Control System

CNC

Machine Type

Vertical Machining Center (VMC)

Key Features

Automated Tool Change, Coolant System, Robust Frame, Precision Milling, Drilling

Model Designation

XK714
