

# CNC Vertical Turning and Milling Center

This CNC vertical turning and milling center is designed for high-precision machining of large and complex parts. It features a robust structure for stability during heavy cutting operations, a high-speed spindle for efficient material removal, and a versatile tool changer for automated machining processes.

## Overview

### CXK125 CNC Vertical Turning and Milling Center

The CXK125 is a high-precision CNC vertical turning and milling center engineered for the machining of large and complex components. It features a robust, stable structure designed to handle heavy-duty cutting operations with efficiency. Equipped with a high-speed spindle and an automated tool changer, this machine offers versatile and precise performance suitable for demanding industries such as aerospace, automotive, and energy.

## Technical Capabilities

### Key Features

- Robust structural design for stability
- High-speed spindle
- Automated tool changer
- Advanced CNC control system

### Machining Capabilities

Vertical Turning, Milling, High-Speed Machining

## Industry Applications

### Suitable Industries

Aerospace • Automotive • Energy
