

Coal-Water Slurry Power Plant

The coal-water slurry power plant is designed for electricity generation. It utilizes coal-water slurry as its primary fuel source.

Overview

Coal-Water Slurry Power Plant

The Maoming coal-water slurry power plant represents a significant advancement in industrial power generation infrastructure. This facility utilizes specialized coal-water slurry technology to generate electricity, demonstrating robust engineering capabilities for large-scale energy projects. Designed for efficiency and industrial reliability, the plant integrates complex infrastructure including tall exhaust systems and multi-story structural support to meet demanding power requirements.

Project Details

Project Category	Foreign Engineering Contracting
Sector	Power Generation
Project Tags	Coal-Water Slurry, Power Plant, Infrastructure, Engineering Contracting
