

# Coarse Particle Air Filter

This filter provides 60-80% efficiency in filtering coarse particles at a testing speed of 5.33cm/s. It is suitable for air purification systems, capturing dust and pollen.

## Product Overview

### Professional Coarse Particle Air Filter

This coarse particle air filter is engineered to provide efficient pre-filtration for a wide range of air conditioning and purification systems. Designed to capture coarse dust and hair, it features low wind resistance to maintain optimal system performance. Its versatile construction allows for various forms and material configurations to suit specific industrial and civil application requirements.

## Technical Specifications

### Filtering Efficiency

<b>60 %</b> Min Efficiency	<b>80 %</b> Max Efficiency
-------------------------------	-------------------------------

### Test Air Speed

5.33 cm/s

## Application & Features

### Key Features

- Low wind resistance design
- Effective capture of coarse dust and hair
- Variable material and form options
- Customizable design for client needs

### Typical Applications

Civil air purifiers, HVAC pre-filtration, Automotive air conditioning
