

Coaxial Audio-Video Cable

This combined audio and video cable includes a coaxial cable for video and two insulated wires for audio. The wires run parallel within a shared jacket, offering a convenient single-cable solution for audio-visual connectivity.

Product Overview

Professional AV Connectivity

This combined audio-video cable is engineered to provide a streamlined solution for high-quality signal transmission. By integrating a coaxial cable for video alongside two dedicated audio wires within a single protective jacket, it simplifies installation and reduces cable clutter. This design ensures reliable performance for professional audio-visual setups requiring synchronized signal delivery.

Technical Construction

Cable Composition

- Central video conductor
- Video signal insulation
- Braided shielding layer
- Dual insulated audio wires
- Unified outer protective jacket

Design Type

Combined Audio-Video • Single-Cable Solution

Application

Primary Application

Audio-visual signal transmission
