

Coaxial Cable for High-Frequency Signal Transmission

This coaxial cable is designed for transmitting high-frequency signals. It features multiple layers of shielding and insulation to minimize signal loss and interference.

Product Overview

High-Performance Coaxial Cable

This coaxial cable is engineered for reliable high-frequency signal transmission, ensuring minimal signal loss and reduced interference. Featuring a robust construction with a central conductor, specialized insulation, and a braided shield, it provides superior protection against electromagnetic interference. Designed for demanding applications, this cable ensures consistent signal integrity across various high-frequency environments.

Technical Specifications

Construction Layers

- Central Conductor
- Insulation Layer
- Braided Shield
- Outer Jacket

Cable Series	RG Serial
Primary Application	High-Frequency Transmission, Signal Integrity, Interference Shielding
