

Coaxial Communication Cable

This coaxial cable features a solid copper center conductor and foam polyethylene dielectric insulation. It is suitable for cable television, satellite communication, and broadband internet applications.

Product Overview

High-Performance Coaxial Solution

This coaxial communication cable is engineered for reliable high-frequency signal transmission across critical infrastructure. Featuring a solid copper center conductor and specialized foam polyethylene dielectric insulation, it minimizes signal loss and interference. The construction is reinforced with braided copper shielding and a durable black PVC jacket, making it an ideal choice for cable television, satellite communication, and broadband internet applications.

Construction Details

Center Conductor	Solid Copper
Dielectric Insulation	Foam Polyethylene
Shielding	Braided Copper
Jacket Material	Black PVC

Applications

Key Performance Features

- High-frequency signal transmission
- Minimal signal loss
- Interference resistance

Primary Applications	Cable Television, Satellite Communication, Broadband Internet
