

Coaxial Communication Cable

Coaxial communication cables are designed for reliable signal transmission. They feature various constructions, including solid and stranded center conductors, foam dielectric insulation, braided shielding, and durable outer jackets.

Product Overview

High-Performance Coaxial Communication Cable

This coaxial communication cable is engineered for reliable signal transmission across a wide range of professional communication applications. Featuring high-quality construction with options for solid or stranded center conductors, it ensures consistent performance and signal integrity. The robust design includes foam dielectric insulation and durable outer jackets, making it suitable for demanding environments where signal clarity is paramount.

Construction Details

Key Components

- Center Conductor
- Foam Dielectric Insulation
- Braided Shielding
- Durable Outer Jacket

Conductor Options

Solid Conductor, Stranded Conductor

Application

Primary Application

Communication Signal Transmission
