

Coaxial Communication Cable

This communication cable features a corrugated copper outer conductor, a dielectric insulator, and a central copper conductor. The black outer jacket provides environmental protection and is designed for signal transmission in various communication applications.

Overview

High-Performance Coaxial Solution

This coaxial communication cable is engineered for reliable signal transmission across a variety of demanding communication applications. Featuring a robust corrugated copper outer conductor, a high-quality dielectric insulator, and a central copper conductor, it ensures stable signal integrity. The durable black outer jacket offers essential environmental protection, making it suitable for long-term deployment.
