

Coaxial Communication Cable

This coaxial cable is designed for signal transmission in communication systems. It features a central copper conductor, a dielectric insulator, a copper shield, and a protective outer jacket.

Product Overview

High-Performance Coaxial Solution

This coaxial communication cable is engineered for reliable signal transmission in demanding communication systems. Featuring a central copper conductor protected by a high-quality dielectric insulator and a robust copper shield, it ensures minimal signal loss and interference. The durable black outer jacket provides excellent protection, making it a dependable choice for professional networking and signal infrastructure.

Construction Details

Outer Jacket Color

Black

Conductor Material

Copper

Shielding

Copper Shield

Dielectric Insulator

White Dielectric

Application

Primary Application

Signal Transmission, Communication Systems, Infrastructure
