

CoaXPress Cable for High-Speed Data Transmission

This high-performance CoaXPress cable is designed for machine vision and high-speed data transmission. It features robust construction with precision connectors for reliable signal integrity.

Product Overview

High-Performance CoaXPress Connectivity

This high-performance CoaXPress cable is engineered specifically for demanding machine vision and high-speed data transmission applications. It features robust construction and precision-engineered connectors to ensure superior signal integrity even in challenging industrial environments. Designed for reliability, this cable supports high bandwidth requirements and extended cable lengths, making it an ideal solution for connecting cameras, frame grabbers, and other CoaXPress-compatible devices.

Technical Specifications

Key Performance Features

- High bandwidth support
- Reliable signal integrity
- Extended cable length capability
- Robust industrial construction

Device Compatibility

Cameras • Frame Grabbers • CoaXPress Devices

Primary Application

Machine Vision, High-Speed Data, Industrial Automation
