

Coconut Water and Milk Processing Line

This processing line is engineered for the production of both coconut water and coconut milk. It automates the various stages of processing, from extraction to final packaging.

Product Overview

Professional Coconut Processing Solution

This advanced processing line is engineered to handle the unique challenges of coconut raw materials, preventing oxidation and flavor degradation. Designed for high-efficiency production, the system maintains the natural integrity of coconut water while enabling the creation of coconut milk, cream, and powder. The line features a high degree of automation and utilizes food-grade stainless steel to meet strict international hygienic standards.

Technical Capabilities

Integrated Equipment

- Peeler
- Pulverizer
- Screw separator
- Filtration system
- Disc centrifugal separator
- Blending system
- Degasser
- Homogenizer
- Sterilizer
- Filler
- Flusher
- Autoclave
- Ink coder

Production Capabilities

Coconut Water, Coconut Milk, Coconut Juice, Coconut Powder

Construction & Standards

Hygienic Standards

Food Grade • Hygienic Design

Construction Material

High quality food grade stainless steel

Operational Features

Automation Level

High
