

Coffee Machine Heating Element

This heating element is designed for coffee machines, ensuring consistent and reliable heating. Constructed from durable, corrosion-resistant material, it is suitable for contact with water and provides efficient heat transfer.

Product Overview

High-Efficiency Heating Solution

This professional-grade heating element is specifically engineered for coffee machine applications, ensuring consistent and reliable thermal performance for optimal brewing temperatures. Its robust, coiled tubular design maximizes heat transfer efficiency while maintaining structural integrity. Constructed from durable, corrosion-resistant materials, this component is built to withstand direct water contact and long-term operation in demanding environments.

Technical Specifications

Design Type	Coiled tubular
Material Features	Corrosion-resistant, Water-safe

Compliance & Standards

Certifications
CE • RoHS

Installation

Connection Type	Electrical terminals
