

Coil Slitting Line

Coil slitting lines process metal sheets into narrower widths with precision. The system includes multiple stations, guiding mechanisms, and control panels for automated operation.

Product Overview

High-Efficiency Coil Slitting Technology

This industrial slitting line is engineered for the precision longitudinal cutting of steel strips into narrower, custom-sized widths. By processing wide coils into refined strip coils, the system provides essential preparation for high-quality welded pipe production and various formed sections. The automated design ensures consistent dimensional accuracy and efficient rewinding for industrial applications.

Technical Specifications

Primary Applications

- Welded pipe manufacturing
- Formed sections production
- Metal strip coil preparation

Process Function

Longitudinal Cutting, Coil Rewinding, Automated Operation
