

Coiled Heating Element for Water Heaters

This coiled heating element is designed for use in domestic water heaters. It is constructed from stainless steel and provides 1800W of power at 110V/220-240V.

Product Overview

High-Efficiency Water Heating Element

This coiled heating element is engineered for optimal performance in water heating applications. Featuring a multi-circle design, it maximizes surface area for rapid and efficient heat transfer. Constructed from high-quality stainless steel, it offers durability and resistance to corrosion, making it a reliable component for domestic water heater systems.

Electrical Specifications

Power Rating

1800 W

Power

Voltage

110V, 220-240V

Physical Dimensions

Available Sizes

Metric	Imperial
150mm	6"
165mm	7"
180mm	8"

Pipe Diameter

7 mm

Configuration

4 Circles

Material & Construction

Material Composition

- Stainless steel 201
- Stainless steel 202
- Stainless steel 304
- Stainless steel 316
- Stainless steel 321
- Customized

Surface Finish

Green • Black

Additional Information

Mounting Type	Without bracket
Model	XWHE-9-381
