

Cold Box Insulation Panel

This is a cold box board. It is a component in industrial refrigeration.

Product Overview

High-Performance Cold Box Insulation Panel

This cold box insulation panel is engineered for demanding industrial environments, specifically designed for cryogenic processes and large-scale gas liquefaction facilities. The prefabricated metal design ensures structural integrity and efficient thermal management when assembled into complex enclosures. Its robust construction facilitates rapid installation, making it an ideal solution for critical infrastructure projects requiring reliable, high-performance insulation.

Technical Specifications

Design Features

- Tapered top edge for structural fit
- Modular design for enclosure assembly
- High-durability metal exterior

Primary Application	Cryogenic Storage, Gas Liquefaction, Industrial Refrigeration
Construction	Prefabricated Metal Panel
Installation	Crane-assisted assembly
