

Cold Environment Conveyor Belt

This industrial conveyor belt system is designed for cold environments. It features robust construction with a steel framework, rollers, and a durable belt material suitable for material handling in mining, construction, and other industries where resistance to low temperatures is required.

Product Overview

Engineered for Extreme Cold

This fabric cord conveyor belt is specifically engineered for reliable material handling in freezing environments, including outdoor applications and cold storage facilities. Utilizing a specialized blend of natural and butadiene rubber, the belt maintains high elasticity and shock resistance in temperatures as low as -60°C. Its robust construction ensures consistent performance and durability, making it an ideal solution for industries operating in harsh, low-temperature climates.

Technical Specifications

Carcass Material	Nylon Canvas, EP Canvas
Cover Rubber Composition	Blend of NR (Natural Rubber) and BR (Butadiene Rubber)

Performance Metrics

Minimum Operating Temperature

-60 °C
Temperature Rating

Key Material Properties

High Elasticity • Shock Resistance • Cold Resistance

Customization

Customization	Yes
