

Cold Rolled Steel Coil Slitting Line

This high-precision slitting line is designed for efficient slitting of cold-rolled steel coils. The line includes an uncoiler, slitter, tension unit, recoiler, and hydraulic system for stable operation and production of various strip widths.

Overview

High-Precision Steel Processing

This cold rolled steel coil slitting line is engineered for high-efficiency processing in industrial environments. It delivers superior leveling quality and precise slitting accuracy, ensuring consistent output for steel processing centers and manufacturing plants. Designed for reliability, the system features a robust construction and an intuitive man-machine interface for streamlined operation and maintenance.

Key Features

Performance Highlights

- High-quality leveling system
- High slitting accuracy
- Strong and reliable recoiling
- High production efficiency

System Components

Line Components

Uncoiler, Slitter, Tension Unit, Recoiler, Hydraulic System

Operational Features

Usability & Maintenance

Intuitive Interface • Easy Maintenance • Simple Operation
