

Color Calibration Card for Broadcasting

This color calibration card is used in radio and television broadcasting. It assists in ensuring accurate and consistent color representation in video production.

Product Overview

Professional Broadcasting Reference Tool

This color calibration card is an essential tool for maintaining consistent image quality in professional radio and television broadcasting environments. Featuring a precise selection of color reference stripes, it allows technical teams to calibrate equipment and ensure accurate color reproduction across different display systems. Its clear, high-contrast layout makes it an indispensable asset for video production and studio maintenance.

Technical Specifications

Color Sequence
