

# Combi Boiler Digital Display Unit

This digital display unit is designed for use in combi boilers. It features a segmented LED display that shows temperature and status information, along with function buttons and a rotary knob for adjustments.

## Product Overview

### Intelligent Combi Boiler Control

This digital display unit is designed for precision control of combi boiler systems. Featuring a high-sensitivity touch interface and an intelligent 8-segment timing programming mode, it offers intuitive operation for professional heating setups. The unit includes advanced functionality such as real-time clock (RTC) display and power-off memory, ensuring consistent system performance and user convenience.

## Key Features

### Core Functionalities

- High sensitive touch button interface
- 8-segment intelligent timing programming mode
- Power off memory function
- RTC real-time clock display
- Communication design for system compatibility

## Technical Specifications

### System Integration

Interchangeable with power board • Communication enabled

### Model Identifier

MZ-BGLLED-84A
