

Combi Boiler Digital Display Unit

This is a digital display unit designed for use with combi boilers. It features a clear LED display showing temperature, timer settings, and other operational parameters.

Product Overview

Advanced Digital Interface for Combi Boilers

This digital display unit is engineered to provide a sophisticated, user-friendly interface for modern combi boiler systems. Featuring a large, hidden LED screen with an IMD process finish, it combines sleek aesthetics with high-sensitivity touch controls. Designed for seamless integration, it supports intelligent timer programming and real-time clock functionality to ensure optimal boiler performance and energy management.

Design & Interface

Display Technology	Hidden LED screen with IMD process
Control Interface	High-sensitivity touch buttons

Functional Features

Operational Metrics

8 segments
Timer Segments

Timer Programming	8-segment intelligent timer programming
Memory Settings	Yes
Clock Features	RTC, Real-time clock display

Compatibility

Compatibility	Compatible with various main control boards
